Luxury at every turn

Legge's Luxe. portfolio has expanded with the introduction of four new finishes; oil rubbed bronze, satin black chrome, satin brass and antique bronze. These new finishes add to the original range of satin chrome, chrome and polished brass.

With a total 7 luxurious finishes, 16 lever and 5 plate designs to choose from, the New Zealand designed and assembled Legge Luxe. finishes portfolio is the perfect touch of luxury at every turn.

65 Handing and general information

Introduction

With the ever-increasing technical complexity of building, fire and disability code compliance, it is now more important than ever to specify the appropriate product for security and life-safety.

Let our team of technically trained consultants assist with your product specification and door hardware scheduling to ensure these codes are met.

We have sales offices located in Brisbane, Melbourne, Perth, Sydney, Auckland, Christchurch and Wellington, and are happy to discuss any requirements or queries you may have.

Total solutions

Independently or as an integrated total solution, we can tailor an option to suit your individual security and safety needs for home and business.

Briton – Digital locks, door closers, emergency exit devices, fire door controls, floor springs, pivot sets, transom closers

Cisa – Hotel locking systems, safes

FSH – Electric strikes, electromagnetic locks and hold open devices, electric drop bolts, electronic cabinet locks

Falcon – Auto swing door operators, exit devices

Glynn-Johnson – Door coordinators

Ives – Door controls, general hardware, pivot sets, overhead stops and holders

LCN – Auto equalisers, door closers, fire door controls, benchmark auto swing door

Legge – Door furniture, locks and latches, entrance handles, general hardware, hinges

Schlage electronic systems – Access control biometric readers, electromagnetic locks, offline and online electric locks

Schlage – Door furniture, entrance handles, general hardware, keying systems, locks and latches, access control readers and credentials

Von Duprin – Emergency exit hardware, electronic door control products, electric strikes, exit devices

ARCHITECTURAL HARDWARE CONSULTING SERVICES

Allegion products are not only designed to complement your architectural vision, but also to function in a way that suits the operational and security needs of a facility.

We offer an extensive range of mechanical and electronic hardware and our experienced team can help you specify the right products to meet the needs of all your applications and building requirements.

How we can help

- Hardware specifications
- Door by door schedules
- Product elevations
- Review substitution requests
- Review hardware submittals
- Comprehensive product training
- Compliance to building, life-safety and accessibility codes
- Job site reviews and pre and post installation inspections

When you partner with Allegion, you receive:

- **A dedicated resource**
  Regionally located so you can count on them, our consultants have a thorough understanding of your firm and clients
- **Clear communication**
  We'll relay any issues or areas of concern and work with you to identify the best solutions
- **Customised solutions**
  We provide solutions that are both aesthetically and functionally appropriate
- **Security that matters**
  Our products exceed the highest security standards as well as provide opportunities to integrate with other systems and features in the building

Getting started

Contact us and we'll quickly connect you with an Allegion hardware consultant in your area. To get started, we generally need the following:

- Architectural floor plans
- Door and frame elevations
- Door schedule/details
- Any known requirements

Strength and style

Introducing the Legge Marine Series - an architectural stainless steel range of commercial door furniture.

Constructed from marine grade, 316L stainless steel, the Legge Marine Series offers both strength and style for modern and commercial interiors.

Selected interior and exterior plates from the popular Legge 700 and 5300 Series are available in the Marine Series. Each plate is complete with the popular Alpha lever design - also in 316L stainless steel.

Backed with a 30 year mechanical warranty, the Legge Marine Series will provide durable strength and reliable functionality with style.

A matching entrance handle in 316L stainless steel is also available.

The Schlage SR™ restricted keying system offers end users and building owners a locksmith grade, high precision restricted keying system with key patent protection.

Local compatibility
Made specifically for the Australasian market and available to suit the most common Australasian type barrel profiles

Patent protection for more than 20 years
Thanks to a new restricted design and supply that provides patent protection for Schlage SR keys for the next two decades

Proven strength
High quality nickel silver keys provide superior key strength and reliability the Schlage brand is renowned for

Increased combination range
Keys can be cut to depths of 0 to 10, increasing the range of combinations that can be configured

Key colour coding
18 different colour options available. Contact us for full colour range.

Why use Schlage SR™ system?

Schlage SR™ keys are identifiable as SR1, SR2 & SR3, and 18 different coloured identification studs can be attached
to the bow of the key. Schlage SR system is:

- Drill resistant
- Pick and bump resistant
- Nationwide network of experts across Australia and New Zealand
- In-house keying experts
- Housing standard shape and size
- Developed in Australia by Schlage (a trusted global brand for over 95 years)
- 6 pin cylinder for added protection

Schlage has re-designed high security keying systems

In schools, apartments, hospitals and universities, a flexible and secure keying system is the foundation of a multi-level security management system. Schlage SR™ delivers a higher level of security because it cannot be duplicated without authorisation. Its distinctive design provides the user with total key control.

Restricted keyways

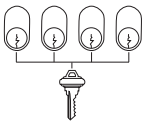
The Schlage SR™ system allows us to design, build and supply a restricted keying system to suit individual requirements, either from Allegion's door scheduling service or from information supplied by the client. The Schlage SR™ system is developed using the latest master keying software to ensure system integrity and security. Keys can only be obtained/copied from authorised resellers, with authorisation from the Building's owner
or nominee.

Master keying information

Most Schlage and Legge locks are supplied individually keyed. A well designed keying system facilitates more control and increased security. Specially keyed systems have been developed to enable end users to assign access to individuals for locks that they are authorised to operate. Lost ball construction keying is available.

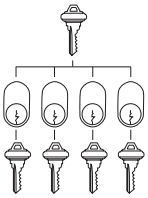
Keyed to differ

All keys are individual and stand alone. Each lock can only be opened by its own individual key.



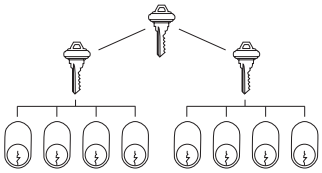
Keyed alike

Allows for a number of locks to be operated by the same key as they are keyed to a specific code. This system is particularly suitable for residential applications with front and back doors.



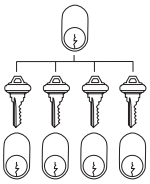
Master keyed

This system allows locks in a group to be keyed individually and does not allow those individual keys to operate any other lock in the system. However all locks in the system can be operated by one master key.



Grand master key

With this system locks in several groups are independently keyed with a master key for each group. Each group is independent of each other, and the grand master key will work with all locks in all groups.



Maison keying

A maison key system is a keying system that allows a lock to be opened with a number of unique individual keys. Typically found in applications like apartment buildings, it provides unrestricted access to common doors. Unlike master keyed systems, the lack of security makes this a less attractive option.

Fire and life safety closers

Automatic detection and containment of fire and smoke are the best ways to minimise danger to life and property. LCN Sentronic door closers/holders are designed to hold swinging doors open in normal use and release and automatically close the doors under fire conditions.

LCN's Sentronic Series are heavy duty, electronically controlled closers/holders for fire or smoke barrier doors. When interfaced with a fire or smoke alarm, the closer will activate and close the door. The closers work with ionization, photoelectric and heat-sensing detectors.

The 4040SE is a heavy duty, non-handed, non-sized closer/holder designed to provide adjustable, single point hold-open for fire and smoke barrier doors.

The LCN4310ME can be fitted with the swing-free arm, allowing the door to be opened 160° without door closer resistance. This makes it easy to operate for those with physical limitations or impairments – perfect for health or aged-care facilities.

The Sentronic Series of closers function as a full rack and pinion door closer when hold-open is not engaged or current is interrupted.

Specifications

*Use USA handing chart when ordering. See page 65

For some building users, a self-closing fire door can become a barrier to access

The principal objective of a door closer is to close a door, and to keep unlatched fire doors closed in the event of a fire. Not surprisingly, the ease with which these doors can be opened can be difficult to operate for many users, including the elderly, those with physical disabilities and small children.

Briton's range of cam action closers remove that barrier to access by reducing the initial opening force required, while retaining the power and control to close the door afterwards.

In contrast to a conventional rack and pinion door closer, the linear cam action principle of the Briton cam action series is extremely efficient. The initial opening force decreases as the door opens, allowing users to overcome the closing power without any problem.

Briton cam action closers are available in heavy duty, standard and concealed models.

Commercial lock functions

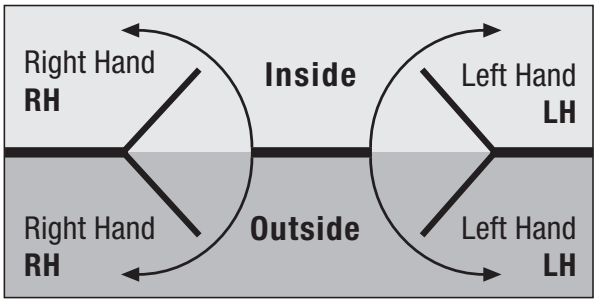
Keyed locks

	Entrance/office lock Push-button locking. Push-button locks outside lever until unlocked with key or by rotating inside lever.
	Entrance lock Turn/push-button locking; pushing and turning button locks outside handle requiring use of key until button is manually unlocked. Push-button locking; pushing button locks outside handle until unlocked by key or by turning inside handle.
	Classroom lock Outside handle locked and unlocked by key. Inside handle always unlocked.
	Storeroom lock Outside handle fixed. Entrance by key only. Inside handle always unlocked.
	Hotel/motel lock Outside handle fixed. Entrance by key only. Push-button in inside handle activates visual occupancy indicator allowing only emergency masterkey to operate. Turning inside handle or closing door releases visual occupancy indicator. Rotation of inside spanner-button provides lockout feature by keeping indicator thrown.

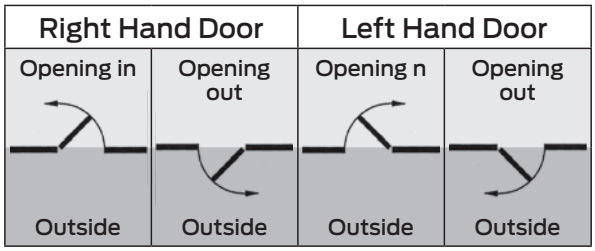
Deadbolt/deadlatch locks

	Single cylinder and turn deadbolt Deadbolt thrown or retracted by key from outside or by inside turn unit. Bolt automatically deadlocks when fully thrown.
	Double cylinder deadbolt Deadbolt thrown or retracted by key from either side. Bolt automatically deadlocks when fully thrown.
	Nightlatch Deadlocking latchbolt retracted by key from outside or by inside turn unit. Rotating turn unit and activating hold-back feature keeps latch retracted.
	Double cylinder deadlatch Deadlocking latchbolt retracted by key from either side. No hold-back feature.

Door handing guide

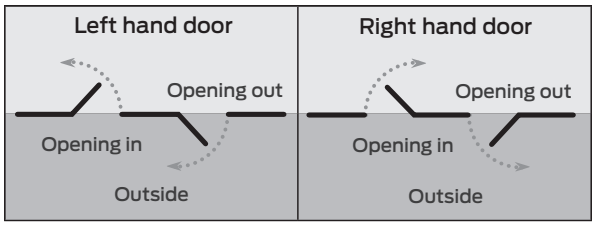


Hinge handing guide (model 13227)



USA handing guide

When ordering LCN handed closers, use this chart

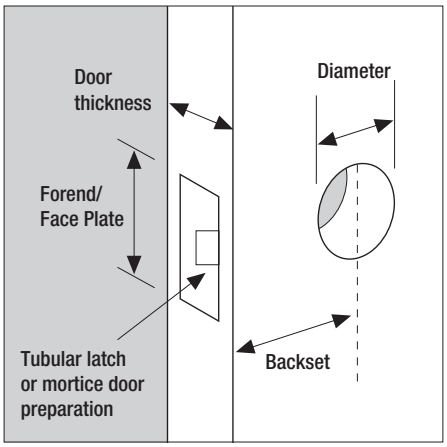


Common terms

Door preparation - A term used for the cut-outs or holes made to the door for the particular lock being installed.

Backset - The distance from the edge of the door to the centre line of prep in door.

Door thickness - The measurement from outside front through to outside back of door. All locks have a minimum / maximum door thickness which they will fit.



Services

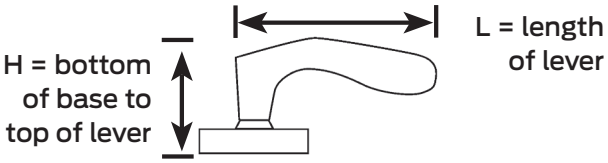
Scheduling – A comprehensive door schedule specification service is provided. Door hardware schedules are available with no obligation.

Master keying – Master keying is a method of controlling access through a building. A key schedule is prepared from provided floor plans. Includes a key tracking system which locates keys and locks and keeps a secure procedure on what keying has been undertaken. Security is based on a system where one lock has its own key. This key will not operate any other locks in the system however where all locks are in the same system the locks can be operated by the one master key.

Keyed alike – KA - More than one lock being operated by the same key.

Keyed to differ – KD – One lock is opened with a single key

Lever dimension guide



Product application classification

Residential and light duty - Moderate use. Typical applications include residential homes, apartments and low traffic offices.

Commercial - Moderate to high traffic flow. Typical applications include classrooms, storerooms, entrance / fire applications.

Heavy duty - Excessive high usage / high security subject to abuse. Typical applications include prisons, stairwell doors and air pressure differential.

Fire rated

Fire rated: Tested on fire door assemblies in accordance with Australian Standards, refer fire door manufacturer for specific approval details.

Compliant with AS1428:1-2009 Design for access & mobility standard
